Prevention (CVD)**

# Improve your practice lipid optimisation

**West Yorkshire Integrated Care Board (WY ICB) in collaboration with Leeds Teaching Hospitals Trust (LTHT) are providing additional support to improve lipid optimisation across West Yorkshire.**

Your PCN/Practice has been identified for this project, beginning October 2024 until March 2025. We are offering you enhanced support to improve lipid optimisation, including:

- Direct access to specialist advice and guidance.
- Access to a virtual lipid multidisciplinary team (MDT).
- Support to complete a practice specific action plan (optional) as part of your plan to improve lipid management.
- Support to review outputs from CVD intelligence tool such as CVDPrevent and develop a population health approach to tackle health inequalities in lipid optimisation.

**Engagement with this project is expected to be supportive of your work towards:**

- QOF indicators CHOL003 and CHOL004
- CVD Prevention and Diagnosis section of the Network Contract DES

# Lipid project Timeline

Phase  
**1.0**

## WY STF project (Apr 23-Aug 24)

Phase one demonstrated positive outcomes for patients and transformed lipid care pathway in our participating PCNs. CVD treat to lipid target increased from 25.9% in September 2022 to 38.11% in March 2024 (12.21% improvement).

Phase  
**2.1**

## PCN/practice selection

There is still a variation in the region, where patients in the most deprived areas have lower proportion of CVD-treated-to-lipid-target compared to those living in least deprived areas. Your PCN/Practice has been identified for this project, beginning October 2024 until March 2025.

Phase  
**2.2**

## Virtual calls

We would like to organise a virtual call with one of our Advanced Clinical Pharmacists to get you on-boarded and discuss how this will support you and your patients.

Phase  
**2.3.1**

## In person visit and action plan

Following your initial virtual call we will come to visit you, to support the development of your practice/PCN action plan including delivery of in house training where required.

Phase  
**2.3.2**

## Advice and Guidance

You will be given direct access to specialist advice and guidance and access to a virtual lipid MDT and using CVD intelligence tools and develop a population health approach to tackle health inequalities in lipid optimisation.
